Registering AlwaysUp (GUI) Using Softstuf OEM License

- 1. Download and Save the Always Up.zip file to a local folder on the Wavewin computer.
- 2. Open the zip file and extract the contents to the local folder where the Always Up.zip file is located.
- 3. Run the AlwaysUp_Installer.exe file. Follow the steps for the installation. <u>Note:</u> Make sure the Start AlwaysUp check box is not checked on the last page of the installation. The license file needs to be copied to the Always Up folder.

🔂 Setup - AlwaysUp	
	Completing the AlwaysUp Setup Wizard
	Setup has finished installing AlwaysUp on your computer. The application may be launched by selecting the installed icons.
	Click Finish to exit Setup.
	Start AlwaysUp
	🔲 Watch a 1-minute demo of AlwaysUp (web)
	Open the AlwaysUp FAQ page (web)
	View the README file
	Einish

- Copy the alwaysup.dat license file to the AlwaysUp install path, c:\Program Files\AlwaysUp. Ensure that the alwaysup.dat file is not read-only. Registration will fail if the file is not writable.
- 5. Run AlwaysUp. A desktop icon was created during the installation.

6. To confirm the registration was successful, select "About" from the "Help" menu. The "License information" section should display Softstuf license details.

Registering AlwaysUp (Command-line)

- Locate the original license file given to you at the time of your purchase. It will be named alwaysup.dat or alwaysup_<your-company-name>.dat. Note that a copy of the file taken from an already registered machine will not work as the registration process updates the file.
- 2. Copy the license file to the location where AlwaysUp is installed (i.e. where the AlwaysUpService.exe file resides).
- 3. Ensure that the alwaysup.dat file is not read-only. Registration will fail if the file is not writable.
- 4. Open a command prompt, CD to the location where AlwaysUp is installed and run "AlwaysUpService.exe -license". AlwaysUp will register itself and should show your relevant license details.
